Monitoring Financial Flows for Health Research 2005: 
Behind the Global Numbers
Mary Anne Burke and Andrés de Francisco, with an introduction by Stephen Matlin

The Global Forum for Health Research is the only organization that regularly tracks and reports on the world’s R&D investments for health.

This 2005 collection of studies looks behind the global totals, analysing R&D for health expenditures in Brazil and by public-private partnerships. It also looks at investments in the research of malaria, and HIV vaccines and microbicides. It further highlights the importance of building robust, sustainable systems of data collection to guide evidence-informed, efficient and effective investments in research to improve health equity.
